# Sport Identification using Ball Detection

Group5

Prof. Manjunath Joshi

TA: Jignesh Patel, Ashish Tiwari, Tanisha Bhayani

## Team Members

Ritika Lakdawala - 201801226

Nishtha Chaudhary - 201801235

Khushali Shah- 20180264

# DATASET

Baseball, Basketball, Football, Tennis, Volleyball:

<https://www.kaggle.com/ponrajsubramaniian/sportclassificationdataset>

Rugby:

<https://www.kaggle.com/lightfeather/football-vs-rugby-image-classification>

**657 Total images for 6 classes (~100 for each)**

Training - 70 % (461 Images)

Validation - 15% (98 Images)

Testing - 15% (98 Images)

04

# Image Labeling & Preprocessing

ANNOTATION AND LABELING :

[Applied for YOLO]

Tool used : <https://app.roboflow.com/project/sports-final-dataset/1>

05

## AUGMENTATION: [Applied for ResNet]

Following are the augmentations that we applied to our images:

### PREPROCESSING

**Auto-Orient:** Applied

**Resize:** Stretch to 416×416

### AUGMENTATIONS

**Outputs per training example:** 3

**Crop:** 0% Minimum Zoom, 11% Maximum Zoom

**Rotation:** Between  $-7^\circ$  and  $+7^\circ$

**Brightness:** Between -8% and +8%

**Exposure:** Between -6% and +6%

Example of an augmented image:

# Data Visualization

Here we have visualized our annotated data by plotting graphs.

First plot: number of images for each class

Second plot: Locations of all bounding boxes

Third plot: co-ordinates of the center of the box

Fourth plot: height vs width of the boxes

# ALGORITHMS

## YOLO v5

Using Pytorch,  
Performs Object  
Detection

## YOLO v4

Using Pytorch with  
CUDA,  
Performs Object  
detection

## RESNET34

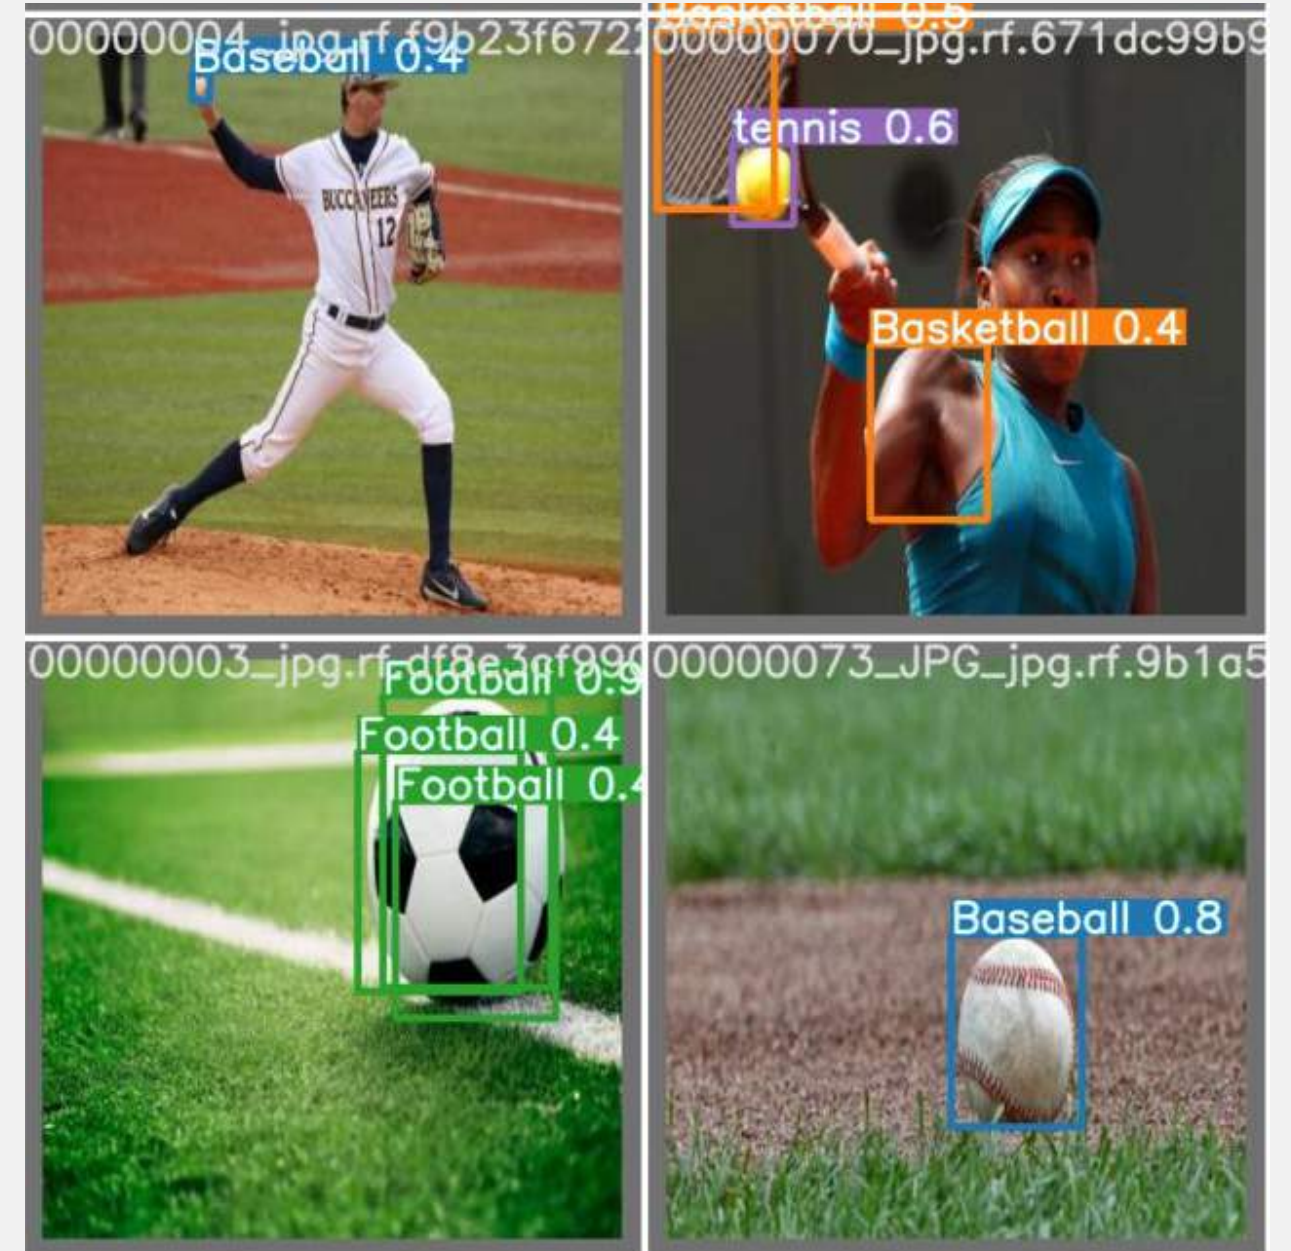

Using fastai and  
Pytorch  
Performs  
Classification

# YOLO v5

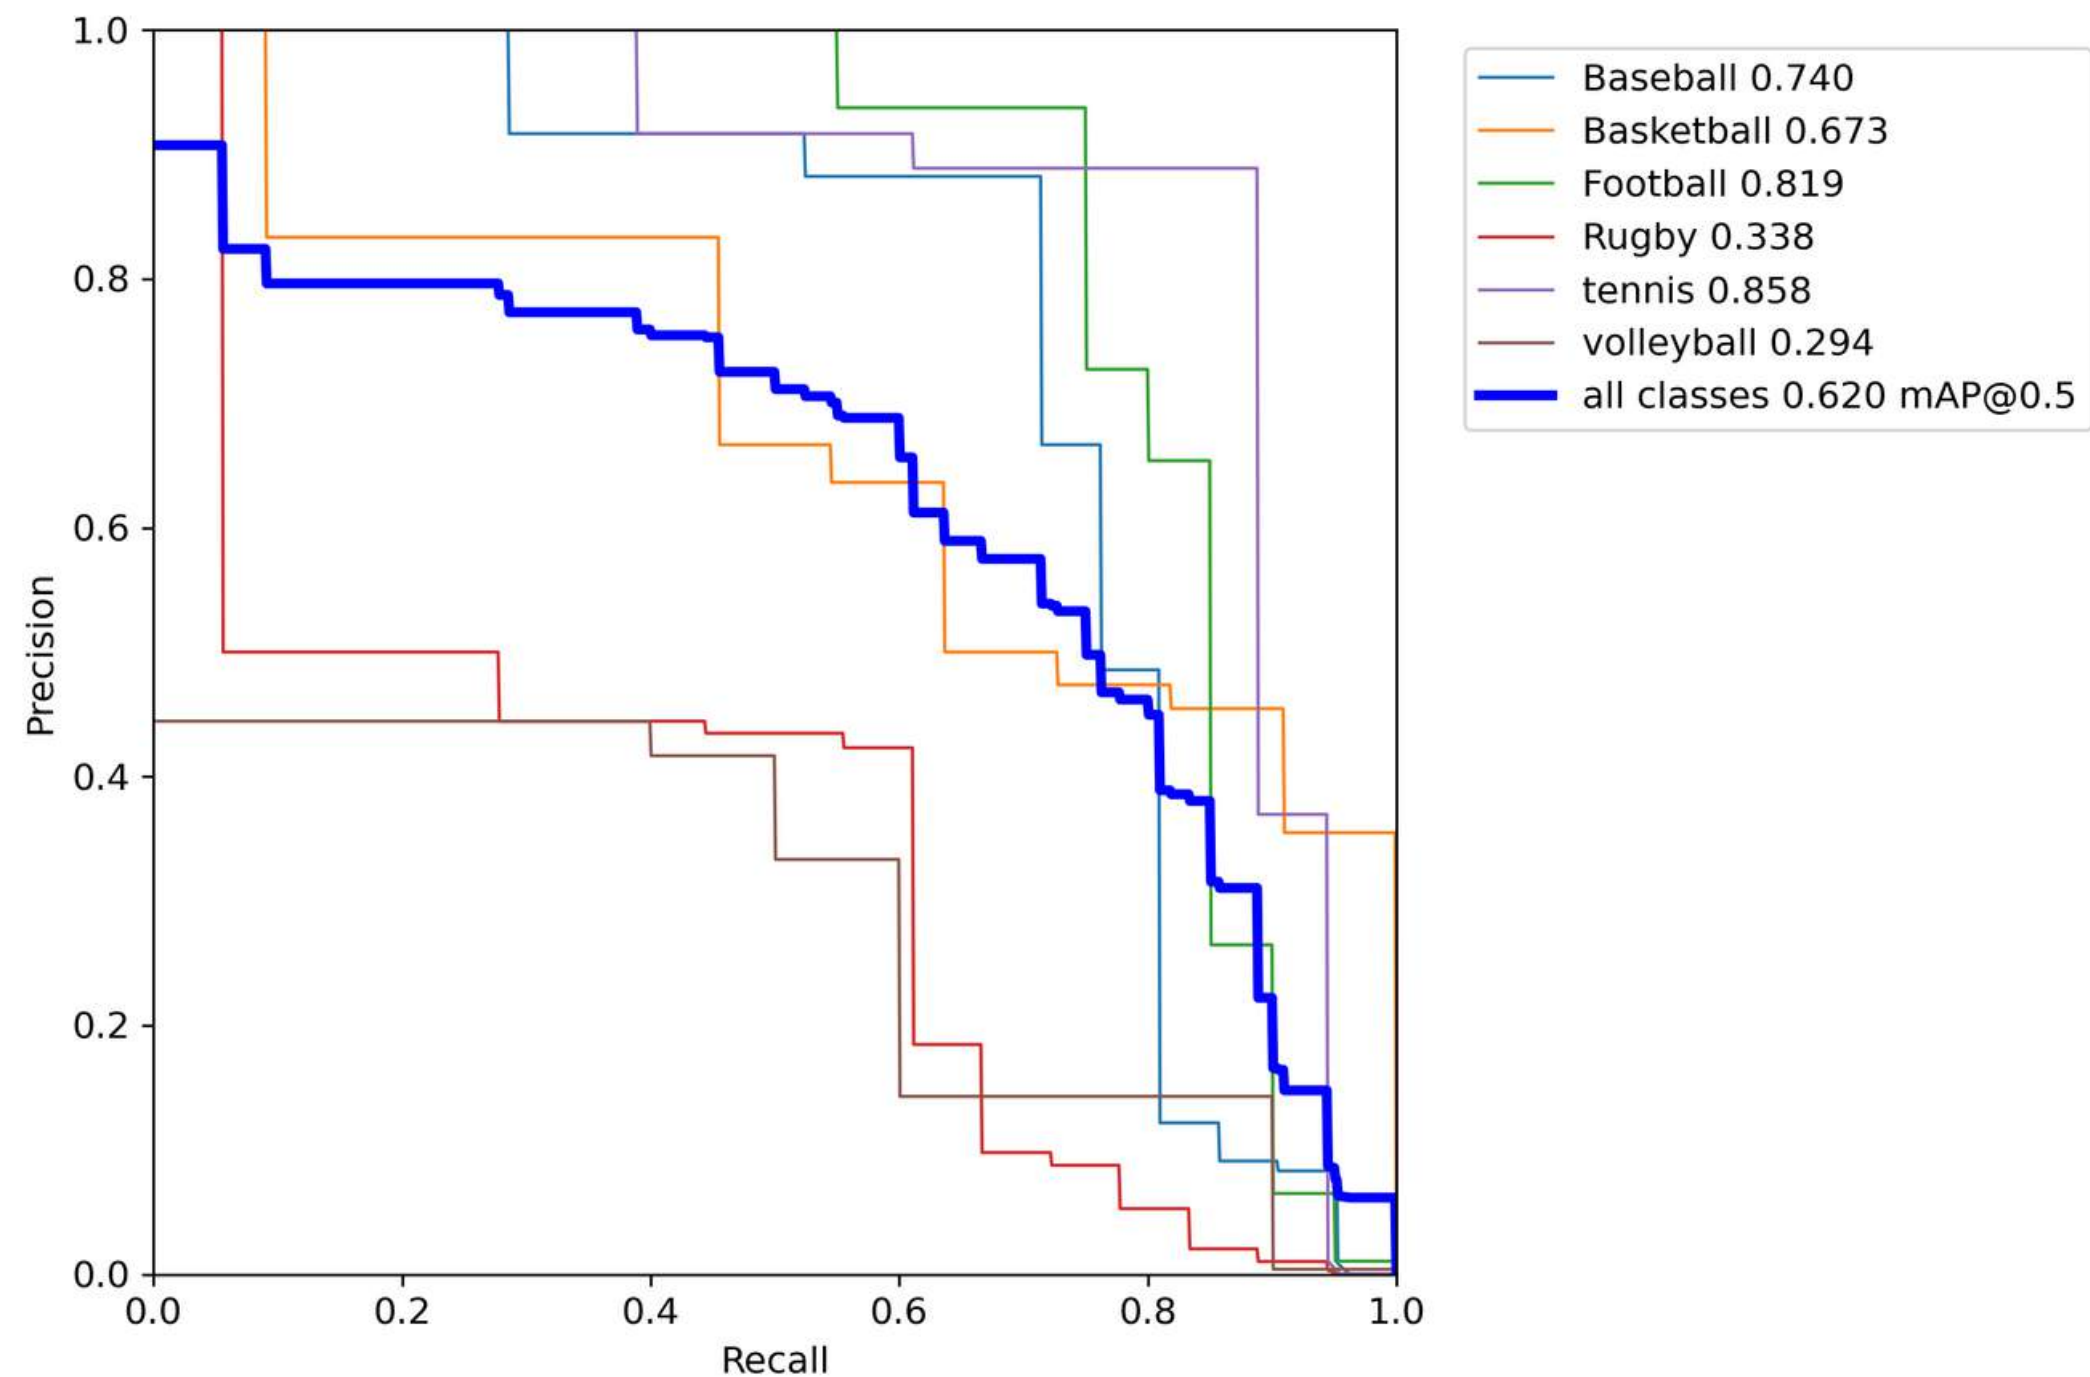

ACTUAL

PREDICTED

# PERFORMANCE

A high area under the curve: both high recall and high precision

high precision: a low false positive rate

high recall: a low false negative rate

CPU times: user 6.17 s, sys: 708 ms, total: 6.88 s  
Wall time: 8min 30s

# Confusion Matrix

Rugby and Volleyball  
give low performance  
compared to other  
classes

i.e. 0.53 and 0.42  
respectively

Same can be  
observed in Precision  
vs Recall graph

# SCALED YOLO v4

GROUND TRUTH

AUGMENTED

# Predicted with Object Detection

12

CPU times: user 15.6 s, sys: 1.92 s, total: 17.5 s  
Wall time: 30min 46s

As we increase epochs, precision and recall will increase which shows that performance increases as the weights are updated .

# RESNET34

Prediction/Actual/Loss/Probability

Baseball/Rugby / 5.43 / 0.00

Baseball/Rugby / 4.68 / 0.01

Basketball/Rugby / 1.34 / 0.26

Football/Rugby / 1.11 / 0.33

Rugby/Rugby / 0.46 / 0.63

Baseball/Baseball / 0.46 / 0.63

Baseball/Baseball / 0.45 / 0.64

Football/Football / 0.42 / 0.66

Rugby/Rugby / 0.34 / 0.71
